

**Main Street  
Roadway and Structure Improvement Project  
UPDATE**

As you may have noticed, road construction signs are in place for the SR 0063 Roadway and Structure Improvement Project. While Mother Nature affected the initial start and early progress, the construction is well underway for the structure widening and additional westbound lane between Harleysville Pike and the Walmart entrance. You will soon notice additional equipment, crane, etc. which will be used to place the arch culvert extension under the westbound lane of S.R. 0063 (Main St.). Roadway widening, pedestrian accommodations/sidewalk, utility relocations, and drainage improvements are just a few of the many components of this project. This project has been partially funded through the Multimodal Transportation Fund Grant program offered through the *Pennsylvania Department of Community & Economic Development (DCED)/Commonwealth Financing Authority (CFA)*. Flyway Excavating, Inc. is the prime contractor for the project. The planned schedule for completion of the project is by Fall of 2017. The Township is appreciative of your patience at this critical location while construction is occurring. We all look forward to the finished product.
